

Crosstex® Dental Dams

Introducing The Next Generation Of Dental Dams — Advanced Protection For Every Patient And Every Procedure!

No one offers a wider selection of dental dams than Crosstex! Crosstex dental dams are available in a low protein, powder-free latex rubber, and new latex-free varieties. Both the low protein latex and latex-free products drastically reduce the risk of allergic reactions for both patients and staff.*

Crosstex dental dams help to make procedures easier for you and your patients by reducing or eliminating:

- Interference from the patient's tongue and cheek.
- The need for frequent rinsing and the use of multiple cotton rolls.
- Blood and saliva contamination – 2 common reasons for restoration failure.
- The risk of patients aspirating a foreign body, such as amalgam, old porcelain and composite.
- Contaminated aerosols that can be an infection control risk.

Crosstex dental dams provide several important benefits, including excellent tear resistance, better contrast and visibility of the prepared teeth, quicker and more efficient procedures and improved patient comfort.

NEW Latex-Free Dental Dams

Crosstex Quality Latex Dental Dams — Low In Protein And Powder-Free!

Manufactured from premium latex, Crosstex has created the next generation of low protein dental dams specifically designed to reduce the allergic reactions associated with latex products. Our latex dental dams are also powder-free, virtually eliminating the transmission of the allergy causing protein. Crosstex dental dams are 100% non-chlorinated, exhibit excellent tear resistance and are available in a variety of gauges: thin for endodontic work; medium for overall ease of placement; and heavy for tight contact areas or when stronger support is needed. And all Crosstex dental dams are designed to save you time and reduce frustration.

Latex Dental Dams
