Schedule a lunch-and-learn and earn CE!

COLTENE is proud to sponsor this accredited lunch-and-learn series in partnership with Viva Learning. Each course includes a one hour lunch and hands-on session with COLTENE products plus access to a free online CE class.

Hands-on with BRILLIANT EverGlow, our universal submicron hybrid composite. BRILLIANT EverGlow is the newest generation of composite from COLTENE, offering easy polishability, gloss retention, ideal handling and exceptional blending properties.

CE COURSE: Understanding the Filler Technology of Universal Composites*
This CE article explores the composition of universal composites, the classifications of different filler technologies, and how the specifics of the fillers used impacts a composite's performance.

A hands-on look at the versatility, convenience and efficiency of the BioSonic Ultrasonic Cleaners from COLTENE, maker of the leading BioSonic brand cleaners and solutions for the dental practice.

CE COURSE: Cleaning — The Vital First Step in Dental Instrument Reprocessing*
In the dental setting, “instrument reprocessing” refers to the process of cleaning and sterilizing reusable instruments so that they can be safely used again. It is a major component of a dental practice’s infection control program, and one of its most complex. This course provides an overview of the instrument reprocessing process, with an emphasis on the cleaning step.

Experience the wide range of metal and aesthetic fiber posts available from COLTENE, maker of the ParaPost brand and the leading post innovator for more than 50 years.

CE COURSE: Restoration of Endodontically Treated Teeth Using Prefabricated Posts*
When restoring an endodontically treated tooth it is often necessary to place an endodontic post. These posts serve to retain and support the core, and aid in transferring the functional forces of the restoration to as wide an area as possible. This course explores the different types of posts available, post design, post selection criteria, and the basics of core preparation.

Experience the ease of use, flexibility and strength of COLTENE’s HyFlex family of controlled memory endo files. HyFlex EDM is the newest addition to the HyFlex line, offering unmatched flexibility and fracture resistance in a one-file system.

CE COURSE: The Impact of NiTi Metallurgy on Endodontic Files*
This CE article explores the use of endodontic files for dentin removal and canal shaping during root canal procedures. Originally made of carbon steel and then stainless steel, nickel titanium (NiTi) files have now become the industry standard. However, standard NiTi files can contribute to a variety of procedural events. The more advanced Controlled Memory (CM) and Electrical Discharge Machining (EDM) Controlled Memory NiTi files can help overcome these problems.

To schedule an event, please contact your COLTENE representative.

*You will receive an access code to online CE at ColteneLearning.com following the lunch and learn event.
