

EYESPECIAL C-II CAMERA

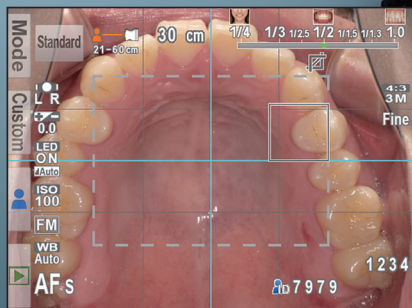

FROM SHOFU DENTAL CORPORATION

The EyeSpecial C-II camera is designed exclusively for dentistry. It was created for dental and orthodontic photography, case presentations, and at the bench in a dental laboratory. It is extremely user friendly, and can be held comfortably – with one hand. All team members, regardless of their experience level, can achieve identical results. Shofu's smart and stylish camera offers 12 megapixels, intuitive one-touch operations, an ultra-lightweight, sleek body design, and a large LCD touchscreen that allows the user to view and scroll through images effortlessly – even with a gloved hand. The EyeSpecial C-II is compatible with an Eye-Fi wireless memory card. Images can be instantly transferred and uploaded onto a tablet, computer, or smartphone. It comes with SureFile, a proprietary photo management software that allows the user to automatically sort and file images by patient ID number. Each time a patient's ID number is entered into the camera, SureFile will load all of the images for that patient to the same folder. This saves time and helps to maintain compliance with HIPAA standards. The EyeSpecial C-II is ready to use and does not require changes or routine-setting modifications, unlike other dental digital cameras. The preset functions and settings, along with the intuitive one-touch operations, make for fast, easy, reproducible images every time. The camera also has exceptional depth-of-field range that allows the anterior and posterior teeth to be in focus at the same time. It has fast autofocus-ing and anti-shake capabilities, as well as infrared, UV, and anti-reflection filters. It is water and chemical resistant. This is essential for infection-control procedures in the dental office. The EyeSpecial C-II features the FlashMatic system with four macro LED lights mounted around the lens, as well as an inside and outside flash located on both sides of the lens. This unique flash system blocks out the ambient light to allow consistent images to be achieved. The EyeSpecial C-II is a smart digital camera with sophisticated results that is super simple. It is ultra-lightweight, rugged, durable, and avoids cross-contamination. It is a compact camera that gives professional results with a great magnification range and exceptional depth of field. The camera's built-in double flash and shooting modes make using it simple. If you are looking for the best and easiest digital images for your patient records and case presentation, this is the one to buy. Call and order one now.
