USE THE BEST CEMENT — EVERY TIME

- Ease of use:**
Fewer steps, easy seating, generous working time and easy removal of excess cement.
- Patient experience:**
Less chair time. Non-irritating to pulp. No post-op sensitivity, biocompatible.
- Save time and money:**
No need for any extra material or pre-treatment.
- Minimise the risk of secondary decay:**
Integrates with tooth structure to create permanent seal. Hydroxyapatite formation on the cement surface occluding marginal gaps.

“Its ability to self-seal, create apatite, and to fight off cavities...this bioactive material is the future of where we're at in dentistry”.

Dr. Todd C. Snyder
