NEW LITETOUCH™ ALL-TISSUE LASER **A better way of performing everyday dentistry.... Every day.**

ids (integrated dental systems) introduces The LiteTouch™ All-Tissue Laser. In partnership with Light Instruments, the world's leading manufacturer of all tissue lasers, ids is excited to bring the world's most versatile laser to market in the USA. This game changing laser with built in Laser-in Handpiece (L-I-H™) technology allows dentists to treat more patients, more efficiently than ever before. This unique delivery system eliminates fragile fiber optic lines and large articulating arms found on other lasers. Most LiteTouch procedures do not require injections so patients are free from the pain and anxiety associated with traditional dentistry. The LiteTouch laser is the smallest all tissue laser on the market and is available from your dental dealer at up to 50% less than other systems.

"In addition to being the most compact all-tissue laser, we are the only company that includes in-office training with every unit" explained Carey Lyons, CEO- ids, "We come to your office for a full day to train the dentist and the entire office staff to ensure the unit is fully integrated throughout the practice."

With less patients receiving injections, dentists can see more patients and be more efficient during the day. The result is a better patient experience.

The LiteTouch™ All-Tissue Laser is available from your dental distributor. For more information, please visit lightinstruments.com or call **866.277.5662**.
