

KaVo Kerr Expands Access to Premier Caries Detection Equipment Through VixWin™

Transillumination caries detection device DEXIS CariVu™ now integrates seamlessly with VixWin Platinum

HATFIELD, Pa., March 19, 2019 (Newswire.com) - It's a big day for [VixWin Platinum software](#) users. Originally released by Gendex™, the latest version of the VixWin Imaging software (3.6.0) now seamlessly integrates with [DEXIS CariVu](#) through its new Image Capture software module.

DEXIS CariVu uses cutting-edge transillumination technology to detect caries and cracks earlier and more precisely than by using radiographs alone. With 99 percent accuracy* in caries detection, CariVu has proven to help dental practitioners throughout the globe improve their diagnostic certainty.

With no ionizing radiation, this portable device is a game changer for any dental practice — especially for cosmetic/restorative dentists, pedodontists, holistic dentists, conservative practitioners or any practice looking for a safe and comfortable caries detection solution for their patients. Easy to read and understand, CariVu images are also a great patient education tool that can help patients play a more active role in their treatment planning.

The Image Capture module allows [VixWin Platinum](#) users to easily capture CariVu images and saves them directly to their existing patient charts. Compare CariVu images side-by-side with radiographs, intraoral photos or other CariVu images for a comprehensive look at a patient's dental health.

The Image Capture module of VixWin comes included with any purchase of [DEXIS CariVu](#) as well as complimentary training for dental practices. For more information or to schedule a free, in-office demonstration, visit <https://dexis.kavokerr.com/see> or call 888-ASK-KAVO.
