Helioseal® F Plus – The precise fissure sealant

New formulation for great handling and precise application

Helioseal F Plus is a light-curing, white-pigmented, fluoride-releasing pit and fissure sealant. The sealant features a new formulation with fine filler particles and cannula tip design which give it outstanding handling. This new sealant is thixotropic and flows easily into complex surfaces, even in the upper jaw. Fine filler particles ensure a smooth sealant surface, and the tight marginal seal provides protection against cariogenic germs. The handling is extremely user-friendly.

Faster to apply

Helioseal F Plus can be cured in only ten seconds, and its easy-to-use syringe allows you to dispense and apply the right amount of sealant precisely where it is needed. The fine tip promotes swift and exact placement in fissures. Precise application, excellent flow and wetting properties together with exceptionally short light-curing times make Helioseal F Plus your first choice when it comes to sealing fissures quickly and efficiently.

Helioseal® is a registered trademark of Ivoclar Vivadent, Inc.
