

HOW TOOTH WHITENING WORKS

WHAT IS THE DIFFERENCE BETWEEN POLA AND DIY KITS THAT CAN BE PURCHASED ONLINE?

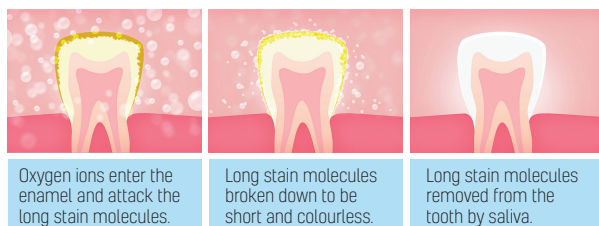

There are numerous brands and methods of teeth whitening available to purchase online or over the counter, however, they are not always reliable and safe. It is always important to consult your dentist if you are looking to whiten your teeth, as they will be able to assess the health of your teeth and decide whether it is safe to whiten them. Clinical studies have shown that bleaching with carbamide or hydrogen peroxide if done correctly under the application or instruction of a dentist, is safe for teeth and gums.

WHAT CAUSES TOOTH DISCOLORATION?

Everyone's teeth are unique, therefore they discolor and stain in different ways. The discoloration or staining of a person's tooth is typically caused by coffee, black tea, herbal tea, red wine, spicy foods such as curry and smoking cigarettes.

HOW DOES TOOTH WHITENING WORK?

When a whitening product is applied to the tooth, it breaks down into water and oxygen ions. The oxygen ions enter the enamel and attack the long stain molecules to effectively break them down to be short and colorless. These short and colorless molecules are then naturally removed from the tooth by saliva. The intensity of whitening is related to the number of ions available and the length of time they are on the tooth.

HOW LONG DOES IT TAKE TO WHITEN MY TEETH?

With In Clinic whitening, results are obtained in just 30 minutes treatment time. Using a take home whitening system, it can take approximately 5-14 days.
